Super Spacer[®]
SustainaView[®]
Window Technology

50% of the 110 million U.S. homes have single pane windows.¹ Inefficient glass contributes to up to 35% of energy wasted in buildings and 10% of total carbon emissions in the U.S. annually.²

SustainaView[®] Window Technology

You've made the decision to purchase new windows for your home.

Now, how do you choose which are the best for your family, your home and the environment?

Windows can do so much more than they used to, including reduce noise, prevent mold, improve overall comfort—and reduce the negative impact you have on the environment.

You have many options, but only one clear choice to protect your view outside. Make sure your new windows are made with Edgetech's proven Super Spacer[®] SustainaView[®] technology.

SustainaView® for the environment...

With a heightened awareness of the human effect on the environment, homeowners are becoming more conscious about the choices they make in their lives and in their homes. It's making changes in even the smallest of ways, including choosing Super Spacer® SustainaView® window systems, which are proven to:

- Last longer without needing to be replaced, keeping windows in your home longer and out of landfills
- Promote energy efficiency so that less energy is needed to heat or cool your home

In cold climates, energy-efficient, dual-pane windows with low-e coatings can reduce heating bills by as much as

34%

In warm climates, energy-efficient, dual-pane windows with low-e coatings can cut cooling costs by

38%³

SustainaView® for you...

With Super Spacer® SustainaView® technology, you have the peace of mind that you are preserving the environment—and so much more.

Cost Savings

Windows made with SustainaView® technology help block outside or inside heat from passing through the window system. By keeping heat from passing through, you will use less energy to heat and cool your home. This translates to savings on your energy bills.

Worry-free Maintenance

When the elements come knocking, windows made with SustainaView® technology are more than up to the challenge. Windows made with flexible foam Super Spacer® develop far fewer stress cracks that may eventually lead to seal failure. SustainaView® windows will provide you with many years of worry-free maintenance, standing up to a wide range of temperatures, UV light and the deteriorating effects of condensation.

And SustainaView® for your family...

Your home is a haven for your family, so overall comfort should be part of your purchase decision. Super Spacer® SustainaView® window technology not only helps you maintain your ideal indoor temperature, but it also helps reduce outside noise and protects your family from harmful molds.

Noise Reduction

Whether it is cars whizzing by, restless neighbors next door, airplane noise or power tools blasting on a Saturday morning, SustainaView® technology helps keep it quiet inside. That's because the closed-cell polymer foam in Super Spacer® transmits very little sound compared to conventional metal spacers. Just another reason you'll be more comfortable in your home with SustainaView® window systems.

Mold Prevention

Condensation is a problem that looks unsightly and over time will stain wood, peel paint and rot frames. Condensation can also lead to mold growth, which has been linked to childhood asthma and an increase in general respiratory illness, allergies and outbreaks of fungal disease. SustainaView® technology virtually eliminates condensation – and the threat of harmful mold growth around your windows.

Nearly **40%** of home remodeling
in the U.S. is being done **Green**⁴

Super Spacer® SustainaView® technology is known to provide a lasting seal, assuring the window will retain its energy-efficient benefits for many years.

SustainaView® – The strength is in the seal

True energy-efficient, sustainable windows hold such characteristics as low-conductivity gas fillings (argon or krypton), low-e coatings and dual-seal insulating glass systems.

Super Spacer® SustainaView® technology is a dual-seal system that is known in the industry to last up to five times longer than single-seal systems. Its structural adhesive plus perimeter edge moisture vapor seal equals the most reliable insulating glass unit on the market today.

Our dual-seal system helps Super Spacer® insulating glass units last up to five times longer in durability tests than single-seal units.

Super Spacer® units withstand the 140°F/60°C temperatures, 95 - 100% humidity and constant UV bombardment in the world's toughest durability test—the P-1 chamber.

The all-foam formula of Super Spacer® blocks the heat escape path and provides one of the best thermal performances in the industry.

Our all-foam formula offsets the effects of temperature changes, barometric pressure, wind load and glazing pressure. The end result is less seal failure and fewer stress cracks.

Condensation can lead to more than bacteria and molds. It can increase the likelihood of fungi, viruses and mites that cause respiratory infections, allergies and asthma.

With improved sound absorption over traditional metal spacers, NO-Metal Super Spacer® is a huge help in keeping the decibels down.

Super Spacer® SustainaView®

Window Technology

Be sure the windows you buy are certified through NFRC to carry the ENERGY STAR® label!

sustain·abil·ity: To meet the needs of the present without compromising the ability of future generations to meet their own needs.⁵
