GlassBuild 2011
Booth #415

Quanex Building Products Corporation will debut its innovative lineup of products and services at GlassBuild 2011, Sept. 12-14, in Atlanta. In the past year, the company has strategically aligned Mikron, Truseal Technologies, Edgetech I.G. and Homeshield with the goal of furthering the fenestration industry through high-performance products, creative marketing support, technical services and the expertise necessary to help customers grow their businesses in the competitive marketplace.

"GlassBuild will be an exciting event for Quanex Building Products and our customers," said Mike Hovan, senior vice president, sales and marketing for the Quanex Engineered Products Group. "Our companies and our customers represent the best in the industry in terms of technical expertise, operational excellence and energy efficiency. We look forward to bringing all of this knowledge together for networking, sharing of best practices and, of course, a little fun."

Subject-matter experts will be on-hand at Quanex's GlassBuild booth (#415) to discuss challenges and opportunities currently affecting fenestration companies. The booth will also feature integrated high-performance window and door systems, including energy-efficient IG components, extrusions and fenestration components from Quanex companies, including:

- **MikronWood™ next generation composite material**
- **EnergyCore™ frame and Duralite™ spacer window system**
- **Super Spacer® dual-seal warm edge spacer systems**
- **ImperiClad™ moisture-impervious door frame system with MikronWood™**
